

HVAC MATCHING EQUIPMENT CERTIFICATION

This form shall be part of all mechanical permit applications for unit replacement. Permits will not be processed without supporting documents.

Section 553.912, Florida Statutes, has been revised to read the following, and is effective July 1, 2010:

553.912 Air Conditioners.-All air conditioners that are sold or installed in the state....It is the intent of the legislature that all replacement air-conditioning systems be installed using energy-saving, quality installation procedures, including, but not limited to, equipment sizing analysis and duct inspection.

In addition, the Florida Building Commission, in Declaratory Statement #DCA07-DEC-172, concluded the following:

Section 13-607.AB.3.1.1, Florida Building Code, Building Volume (2007 as amended) requires verification of equipment efficiency to demonstrate compliance with U.S. D.O.E. certification requirements. Outdoor and indoor units that are not designed to be operated together must still meet the D.O.E. standard. If the system does not meet the standard, it is considered to be “mismatched” and does not meet code. The code expressly authorizes “mix-matched” use of components which may be used to replace an exterior compressor and indoor air handler purchased from different manufacturers where they are designed to work together.

- Installing both the Air Handler and Condenser**
Provide equipment sizing analysis with permit application.
Provide certification of visual duct inspection at final inspection.
- Installing either the Air Handler or Condenser (provide documentation)**
The replacement unit you are installing is certified for capacity and efficiency by (check one):
 - ARI Rating**
 - ARL or other recognized testing laboratory**
 - Mechanical Engineer, Florida registration number _____**
 - Manufacturer’s letter**
